WORK EXPERIENCE

APL LOGISTICS

Scottsdale, AZ

Data Science & Business Intelligence Intern

May 2026 – July 2026

- Enabled real-time cargo-risk monitoring across **4 global chokepoints** (Strait of Hormuz, Panama Canal, Cape of Good Hope, Singapore) by integrating live AIS vessel data (MarineTraffic API) from Snowflake with a **~9M-row shipment dataset**, classifying **260+ vessels and 1,300+ shipments** into risk states each cycle.
- Migrated maritime geofencing from **Snowflake spatial SQL** to **Python and Shapely**, enabling operators to define new risk zones anywhere in the world **without code changes**.
- Shipped **20+ production features and fixes** through a disciplined **Git PR workflow** (per-customer filtering, CSV/Excel export, cargo visibility for operations, vessel location history) while preserving app uptime.
- Applied enterprise-approved AI development tools – including **GitHub Copilot, Claude Code, and Snowflake Cortex Code** – to navigate application and database domains, plan multi-file changes, develop SQL queries, generate tests, create documentation, and review implementations with agentic workflows.

INCORA

Tempe, AZ

Warehouse Associate II

April 2022 – January 2026

- Worked with multiple teams in different departments to ensure quotas were met by the end of the day. Led daily and weekly meetings to identify safety concerns and opportunities for growth.
- Collaborated with internal IT to troubleshoot, maintain, and configure networked printers and label devices to reduce downtime for the warehouse team.

PROJECTS

ASU TICKET SYSTEM: FULL-STACK TICKETING SYSTEM | JavaScript, React, Node.js, Express, PostgreSQL/MySQL

- Full-stack ticketing system for managing support requests between students, faculty, and sponsors for ASU capstone, developed with other students using **Agile/Scrum** methodology in two-week sprints.
- Frontend built with **React and Material UI**, featuring modular components for ticket creation, dashboards, user profiles, authentication, and role-based navigation.
- Backend powered by **Node.js/Express, Sequelize ORM, and PostgreSQL/MySQL**, providing RESTful APIs, authentication, email notifications and secure access control for admin, TA, instructor, and student roles.

POLYVIEW: POLYMARKET AI AGENT | TypeScript, JavaScript, React, Node.js, Vercel

- Delivered a live prediction market analytics dashboard within **24 hours** by leading a 3-person Agile team using **React, TypeScript**, and an **MCP-powered AI chatbot** to contextualize real-time Polymarket data.
- Designed and implemented interactive market volume and probability charts in **React with recharts**, seamlessly integrating live backend data and advanced, user-friendly UI features.
- Developed **AI-powered** chart rendering by enhancing prompt detection and keyword parsing, enabling automatic, context-aware visualization of market data in response to user queries.

EDUCATION

ARIZONA STATE UNIVERSITY

Tempe, AZ

Bachelor of Science in Computer Science – Dean's List

May 2026

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML/CSS, Java

Data & Databases: PostgreSQL, MySQL, Snowflake, Firebase, Power BI

Frameworks/Libraries: FastAPI, React, Next.js, Node.js, Flask, Tailwind CSS, Express, Material UI

Cloud & Tools: Azure, AWS, Git, GitHub, Visual Studio Code

AI Development: Claude (Anthropic API), LLM Agents, Agentic Workflows, MCP, Prompt Engineering
